

# ASU Research Park

## Vibrant corporate community

The East Valley's premier research and technology business park, this Innovation Zone is home to many of the area's technology and business headquarters. It is a prime location for headquarters or regional offices that require connections to an established commercial corridor and ready access to area transportation networks. The ASU Research Park is home to 6,700 employees at 51 companies, including Amkor, Edward Jones, Go Daddy, US Foods and Versum Materials. Ongoing research includes flexible display development, wearable and solar tracking technology (conceived in collaboration with the U.S. Army), and semiconductor research including clean rooms and wet lab space.

The ASU Research Park is composed of more than 2.2 million square feet of Class A office/flex and R&D space covering 320 acres. This includes three lakes, mature landscaping, over six miles of surfaced jogging trails and various picnic ramadas that clearly demonstrate a commitment to sustainability (including other implemented operational practices). The park provides financial and economic convenience with space options from small suites to available lots for larger build-to-suit opportunities.

## Location. Location. Innovation.

## The ASU Advantage

ASU Research Park corporations are offered access to ASU services such as cooperative research opportunities and patentable proprietary research contracts.

In addition to being co-located with some of ASU's innovative research units, tenant companies benefit from strong connections to ASU's world-class faculty, a talent pipeline of more than 135,000 students and 530,000 alumni and many other resources.

## Near the park

The ASU Research Park is centrally located with over 200 retail shops and 40 restaurants in the immediate vicinity. Also nearby is executive housing as well as more than 2,500 hotel rooms and two hospitals.

## MacroTechnology Works

Located at the ASU Research Park, MacroTechnology Works is a unique facility - offering clean rooms, wet labs, dry labs, high bay space and office accommodations - that allows ASU to advance research in partnership with private industry.

Co-located with corporate partners, on-site ASU units include the Flexible Electronics and Display Center, the Solar Power Lab, ASU's School of Electrical, Computer and Energy Engineering, ASU's School for the Engineering of Matter, Transport and Energy, and the Quantum Energy and Sustainable Solar Technology (QESST) Engineering Research Center.
